

Experiment 9

AIM: Browser Automation Testing using Selenium (Python)

Step 1: Install selenium and webdriver-manager

```
pip install selenium
```

```
pip install webdriver-manager
```

Step 2: Create Python Script

Create file:

```
selenium_login_test.py
```

Step 3: Import Required Libraries

```
from selenium import webdriver
```

```
from selenium.webdriver.common.by import By
```

```
from selenium.webdriver.chrome.service import Service
```

```
from selenium.webdriver.support.ui import WebDriverWait
```

```
from selenium.webdriver.support import expected_conditions as EC
```

```
from webdriver_manager.chrome import ChromeDriverManager
```

```
import time
```

Step 4: Start Browser

```
service = Service(ChromeDriverManager().install())
```

```
driver = webdriver.Chrome(service=service)
```

```
driver.get("https://the-internet.herokuapp.com/login")
```

```
driver.maximize_window()
```

Step 5:

```
wait = WebDriverWait(driver, 10)
```

Step 6: Enter login Credentials

```
username = wait.until(  
EC.presence_of_element_located((By.ID, "username"))  
)  
username.send_keys("tomsmith")  
driver.find_element(By.ID, "password").send_keys("SuperSecretPassword!")
```

Step 7: Click login Button

```
driver.find_element(By.CSS_SELECTOR, "button.radius").click()
```

Step 8: Verify login Success

```
message = wait.until(  
EC.presence_of_element_located((By.ID, "flash"))  
)  
print("{login Message:", message.text)
```

Step 9: logout

```
driver.find_element(By.CSS_SELECTOR, "a.button.secondary.radius").click()
```

Step 10: Close Browser

```
time.sleep(3)  
driver.quit()
```

Step 11: Run test

```
python selenium_login_test.py
```

Output:

```
PROBLEMS  OUTPUT  DEBUG CONSOLE  TERMINAL  PORTS
